In Fiscal Year 2022, the activities are expected to include continued community, tribal, and stakeholder outreach and training; registrant enrollment via targeted outreach to eligible individuals and high risk individuals; data collection; referral of registrants to services to reduce or control lead exposure effects; measurement of registrants' exposure, health, developmental milestones with their interventions, services, and enrichment activities; follow-up of enrolled registry participants; and evaluation and dissemination of findings to share best practices.

Michigan State university is in a unique position to conduct this work, as it successfully collaborated with community partners to establish the registry through previous CDC grants and has an established relationship with the Flint community. Progress to date has been substantial since the registry's inception, and continued forward momentum depends on the continuity of the same team managing the registry.
